

These instructions apply to the following models:

M23015R, Y, – Red and Amber P2PC LED light

M23015RCL, YCL, – Red and Amber with Clear Lens P2PC LED light

Installation information:

- **Dimensions:**
Length is 4", width is 2"
Spacing between mount holes: 3" center to center.
- **Wiring:**

Wire Color	Function
White	Ground (B-)
Black	Tail / running light

When this light is used on mounting surfaces where water penetration may be of concern (such as the exterior wall of an RV), it is recommended to run a small bead of sealant around the outer edge of the light once it has been mounted. A small dab of sealant should also be used in each mounting hole as an extra measure of precaution to keep water out.

Our recommendation is to use the RV sealant that that comes on a roll in place of the foam gasket when mounting on a surface such as the exterior wall of an RV. Be sure to get the "butyl rubber" style not the "putty/clay" style. Then use Geocel ProFlex RV sealant around the perimeter. This will help to ensure against moisture getting behind the lamp.

For wiring connections, we recommend using our heat shrink sealing crimp splices for exposed locations or "crimp cap" splice connectors
